

# Super Inverter Wall Split Systems

Our EASYfit split air conditioners comprises two elements - an internal and an external unit. The internal unit is fitted to a metal mounting plate on a wall in the room to be cooled, whilst the external unit is situated outside the building. The two are connected using copper pipe. The external unit, or condenser, removes the heat from the room and dissipates it outside, along with any condensation that's built-up in the system, whilst the internal unit provides cooling.
